Dr. Hirsh-Pasek is a leading expert on child development. She is a professor of psychology at Temple University and the director of the Infant Learning Laboratory. Her research has been featured in numerous publications, including The New York Times, The Washington Post, and The Wall Street Journal.

In her book, Dr. Hirsh-Pasek argues that the traditional view of intelligence is too narrow. She says that intelligence is not just about IQ scores. It also includes things like creativity, problem-solving skills, and social skills. And, she says, these skills can be developed through play and other everyday activities.

Dr. Hirsh-Pasek also challenges the idea that some kids are just "naturally" good at school. She says that all kids have the potential to succeed. But, she says, they need the right environment and support to reach their full potential.

The Surprising Reasons Why Some Kids Struggle And Others Shine is a must-read for anyone who works with children. It is full of practical advice on how to help kids learn and succeed. Here are a few of the key takeaways from the book:

- Intelligence is not just about IQ scores. It also includes things like creativity, problem-solving skills, and social skills.
- All kids have the potential to succeed. But, they need the right environment and support to reach their full potential.
- Play is essential for children's learning and development.
- Parents and teachers can help kids develop their intelligence by providing them with opportunities to play, explore, and create.

If you're looking for a book that will change the way you think about children and learning, then I highly recommend *The Surprising Reasons Why Some Kids Struggle And Others Shine*.
